INSTRUCTIONS FOR CLEANING YOUR INSULATED BEVERAGE SERVER

Disassembling the faucet and spout from the beverage server:

Step 1
To remove the body of the faucet from the spout, first locate the wing nut towards the back area of the faucet.

Step 2
To remove the body of the faucet from the spout, first locate the wing nut towards the back area of the faucet.

Step 3
Turn the wing nut CLOCKWISE to loosen (reverse thread) until the faucet comes out.

Step 4
Now with the wing nut loose, use the wing nut as a tool to turn the hex nut to the LEFT to loosen so that the spout can be removed from the body of the beverage server.

Step 5
Remove the hex nut.

NOTE: When loosening the hex nut, you may want to apply pressure to the spout from the inside of the Camtainer well to help prevent the spout from turning with the hex nut.

Step 6
Locate the metal C-ring and with a small metal screwdriver, carefully slide it out of its groove on the spout end.

FIBER WASHER - remove it from the assembly.
INSTRUCTIONS FOR CLEANING YOUR INSULATED BEVERAGE SERVER

Disassembling the faucet and spout from the beverage server:

**Step 7**
Push the spout backwards into the body well of the beverage server to remove it.

**Step 10**
Next, disassemble the faucet by turning the faucet lever assembly COUNTER-CLOCKWISE until the lever section comes out of the body. Turn lever cap.

**Step 8**
After removing the seal washer for cleaning, take a small bottle brush (can be purchased at Harbor Freight) and using warm water and mild detergent, thoroughly clean the spout sleeve, rinse well and dry.

**Step 11**
Clean the insides of the faucet body using a bottle brush.

**Step 9**
Use the bottle brush to also clean the spout drain port in the body of the beverage server. Rinse and dry.

**Step 12**
Take the silicone seat cup off the faucet lever stem assembly.
INSTRUCTIONS FOR CLEANING YOUR INSULATED BEVERAGE SERVER

Disassembling the faucet and spout from the beverage server:

**Step 13**

With your finger, push the center area of the seat cup until extended to properly clean.

**Step 14**

Using a warm, sudsy solution, clean the insides with a brush or soft towel. Rinse and dry.

**Step 15**

Clean the coil area on the faucet lever stem as well as around the inside area of the lever cap.

**Step 16**

Re-attach seat cup to the stem of the faucet lever.

**NOTE:** If finding difficulty in snapping the seat cup back onto the stem tip use a slight amount of food safe petroleum jelly to lubricate the connection.

Can use PANEF P-16 Petroleum Jelly. www.panef.com

**Step 17**

Re-engage the lever assembly to the faucet body. Secure both by turning lever cap to the right or CLOCKWISE until snug with body piece.

**FEATURE NOTE:** Set the faucet to whichever mode you need—in steady-flow mode or as a dispenser by rotating the faucet lever accordingly.

Rotate the lever to the flat shape at the lever base for steady flow or to the round or radius shape on the base for dispensing.
INSTRUCTIONS FOR CLEANING YOUR INSULATED BEVERAGE SERVER

Re-assembling the faucet and spout from the beverage server:

Step 1

Lay the parts out in this order:

Spout | Rubber Seal Washer | Fiber Washer | Hex Nut | Wing Nut | C - Ring | Faucet Body Assembly

Place the rubber seal washer back on the spout sleeve in the groove on the flared end.

Step 2

Reinsert the spout sleeve through the beverage server body with the threaded end showing on the outside.

Make sure it fits snugly on the inside with no gaps.

Step 3

Step 4

From the outside, put on the thinner fiber washer.
INSTRUCTIONS FOR CLEANING YOUR INSULATED BEVERAGE SERVER

Re-assembling the faucet and spout from the beverage server:

**Step 5**

Using a CLOCKWISE or right-turn motion, screw back on the hex nut.

**Step 6**

Using the wing nut like a wrench, tighten the hex nut by engaging the lobes on both by turning to the right or in a CLOCKWISE direction.

MAKE SURE NOT TO OVER TIGHTEN BEYOND WHAT IS NEEDED OTHERWISE FAUCET WILL LEAK.

**Step 7**

With the wing nut still on the spout, put the metal C- ring back on, placing in the groove just ahead of the wing nut to prevent it from coming off.

Make sure it fits snugly on the inside with no gaps.

**Step 8**

Screw the faucet back on using a COUNTER-CLOCKWISE motion to tighten the wing nut securely so as not to leak.

DO NOT OVER TIGHTEN.

**Step 9**

The finished assembled faucet and spout set-up.
